Physique nucléaire et des hautes énergies

CERN – LHC

Organisation Européenne pour la Recherche Nucléaire –
Grand Collisionneur Hadronique/European Organization
for Nuclear Research - Large Hadron Collider

GANIL-SPIRAL2

Grand Accélérateur National d'Ions Lourds –
Système de production d'Ions Radioactifs en Ligne de 2^e génération

FAIR

Facility for Antiproton and Ion Research

Sciences de la matière et ingénierie

ESRF

Source Européenne de Rayonnement Synchrotron/
European Synchrotron Radiation Facility

XFEL

European X-ray Free Electron Laser

ESS

European Spallation Source

SOLEIL

Source Optimisée de Lumière d'Energie
Intermédiaire du LURE

EMIR

Fédération des Accélérateurs pour les Études
des Matériaux sous Irradiation

LULI-APOLLON

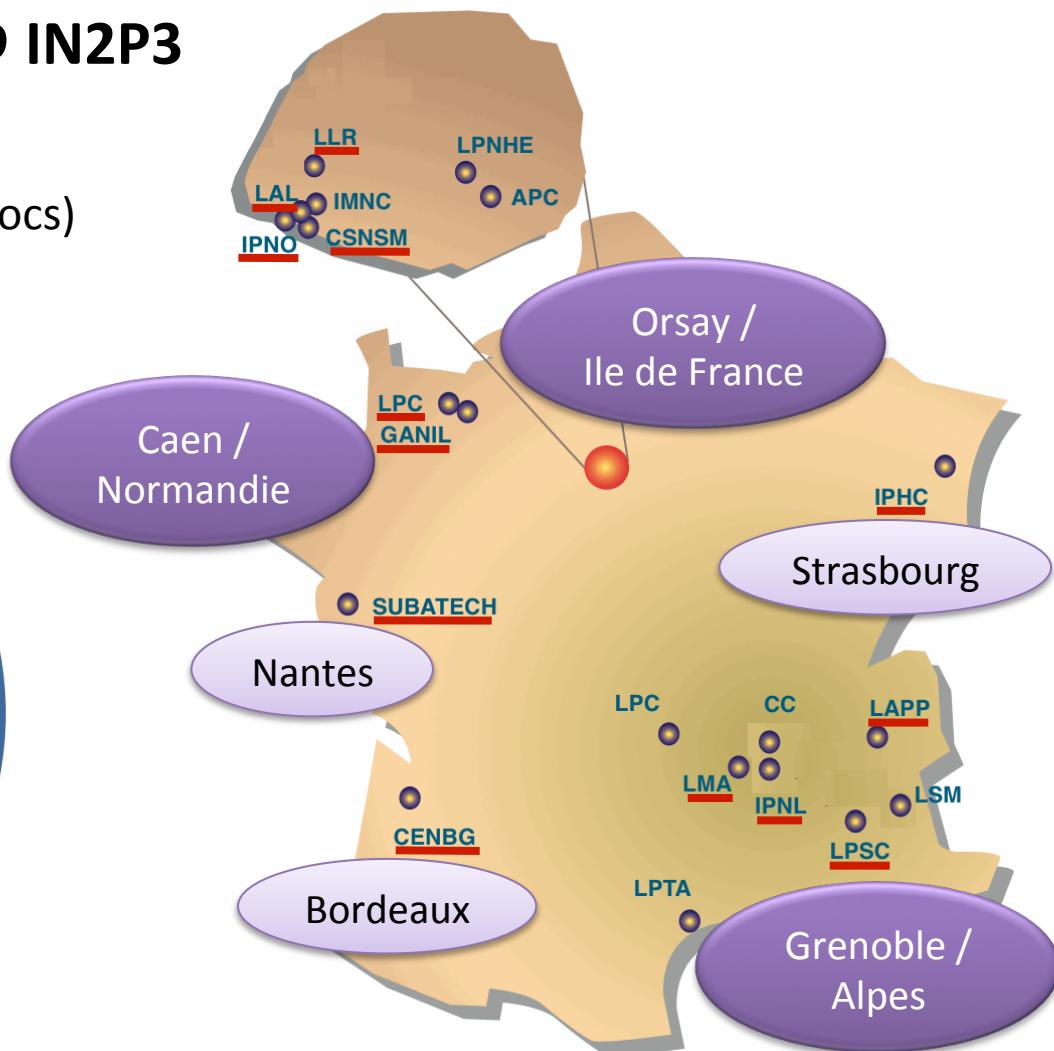

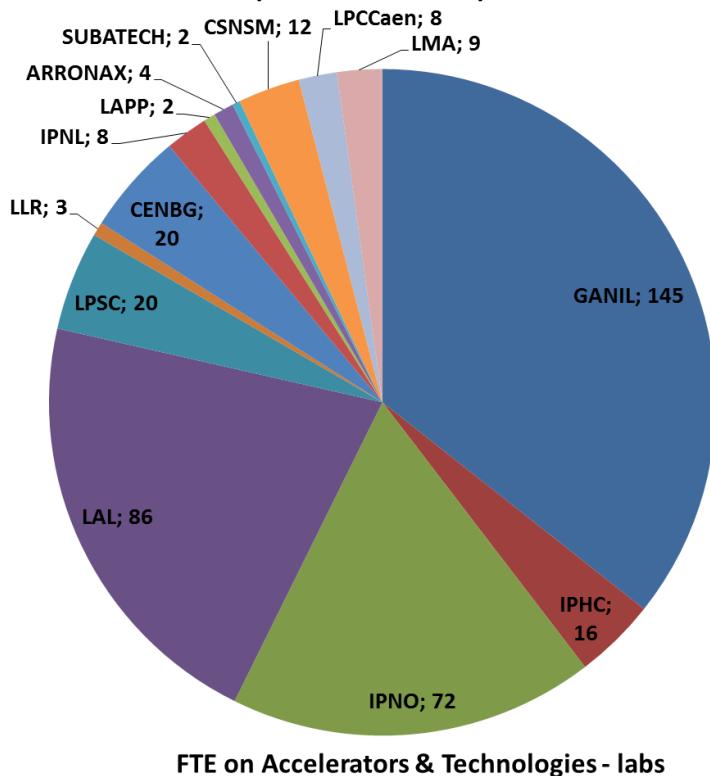

Laboratoire d'Utilisation
des Lasers Intenses

IN2P3: labs involved in accelerators

Accelerators & Technologies @ IN2P3

- 6 main laboratories poles
- About 70 researchers (incl. IR & post-docs)
- About 400 FTE (incl. GANIL)

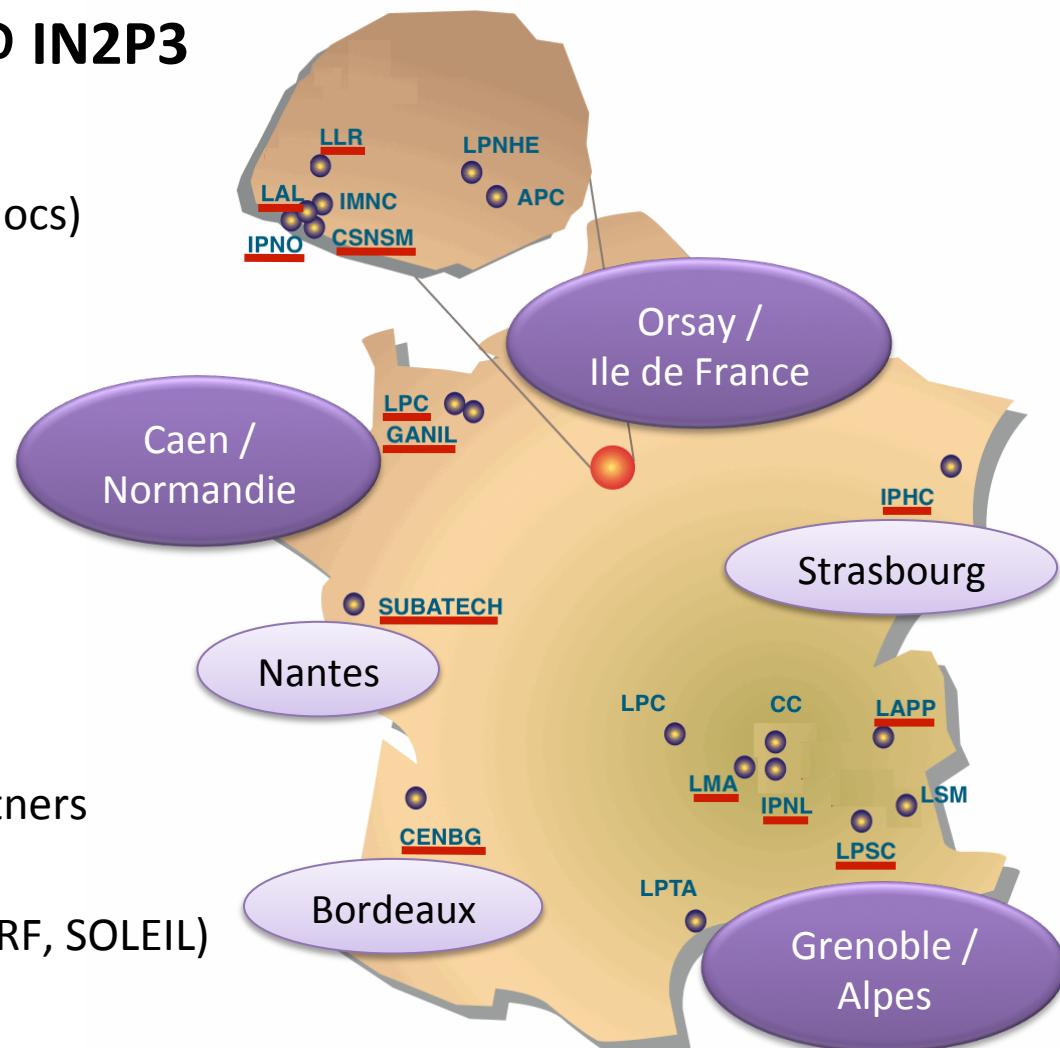

IN2P3: labs involved in accelerators

Accelerators & Technologies @ IN2P3

- 6 main laboratories poles
- About 70 researchers (incl. IR & post-docs)
- About 400 FTE (incl. GANIL)

Strong links with:

- CEA/IRFU
- French universities
& other CNRS institutes (e.g. INP)
- CERN
- Other European and international partners
(e.g. DESY, GSI, INFN, SCK*CEN)
- French accelerator civil companies (ESRF, SOLEIL)
- Industries (e.g. GIS with Thalès TED)

Accelerator R&D: goals & strategies

Driving forces

Push towards **higher intensity/luminosity**

- ✓ Particle sources and injectors
- ✓ High-current/low emittance beams
- ✓ High-power RF systems

Push towards **higher energy, higher gradients**

- ✓ Superconducting RF technology
- ✓ Next generation colliders (ILC, CLIC, FCC)
- ✓ Laser/plasma acceleration

Push towards **higher reliability**

- ✓ Increase competitiveness & efficiency
- ✓ Specific requirements for some applications (ADS)

Make accelerators **available to societal needs**

- ✓ Cancer treatment (radiotherapy, radioisotope prod.)
- ✓ Transmutation of nuclear wastes by ADS
- ✓ Compact accelerators for interdisciplinary applications

Strategies

Sustain an **ambitious accelerator R&D** on selected areas

- ✓ Close interaction with CEA & other partners
- ✓ Participation in European R&D programs

Develop forefront **technological platforms**

Participate to **world-class accelerator project** development & construction

Propose **innovative accelerators** for applications

- ✓ e.g. compact X-ray sources...

Develop **partnerships**

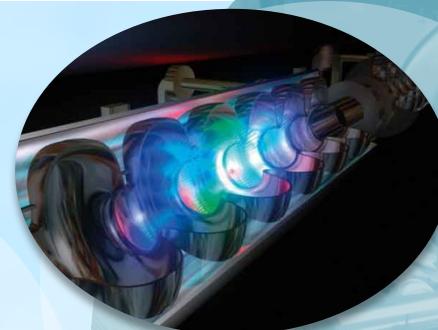

- ✓ with major players (e.g. CERN, DESY...)
- ✓ with emerging countries in the field (e.g. ELI-NP project in Romania)
- ✓ with industries

Accelerator R&D: IN2P3 main skills

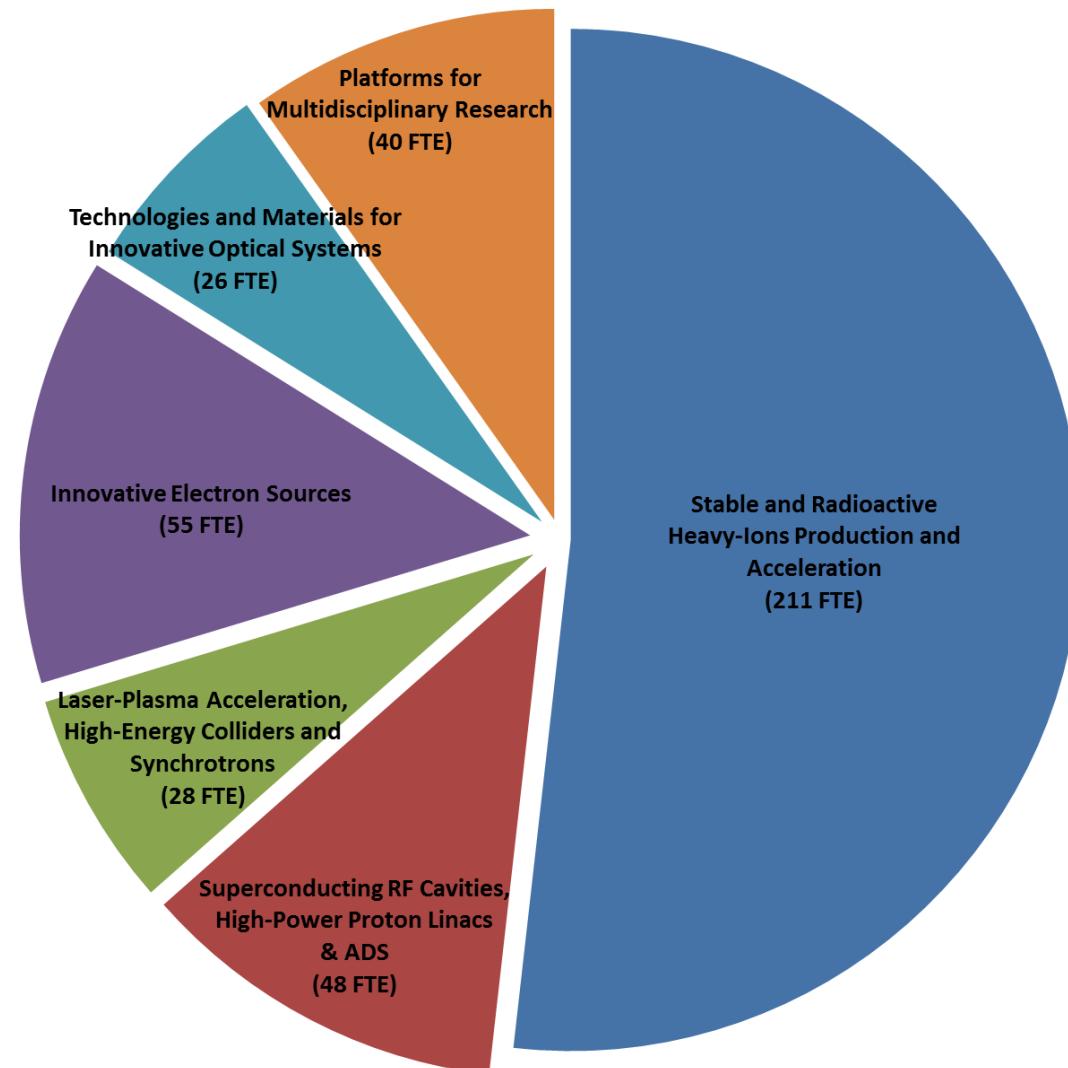

ACCELERATOR RESEARCH & DEVELOPMENTS

- Superconducting accelerating cavities and cryotechnology
- Ion and electron sources
- Radioactive beams
- Plasma acceleration, laser/beam interactions
- Beam dynamics, final focus
- Beam instrumentation
- Related technologies (RF, vacuum...)

INTENSE BEAMS LASERS SUPERCONDUCTING
ION SOURCES PLATFORMS CRYOTECHNOLOGY

Accelerator & Technology R&D programs

Accelerator & Technology R&D programs

STABLE & RADIOACTIVE HEAVY-IONS PRODUCTION & ACCELERATION

Leading labs

GANIL, IPNO

Other labs:

LPSC, CENBG, IPHC, CSNSM, LPC Caen, IPNL

Accelerator operation & platforms

GANIL-SPIRAL1, ALTO

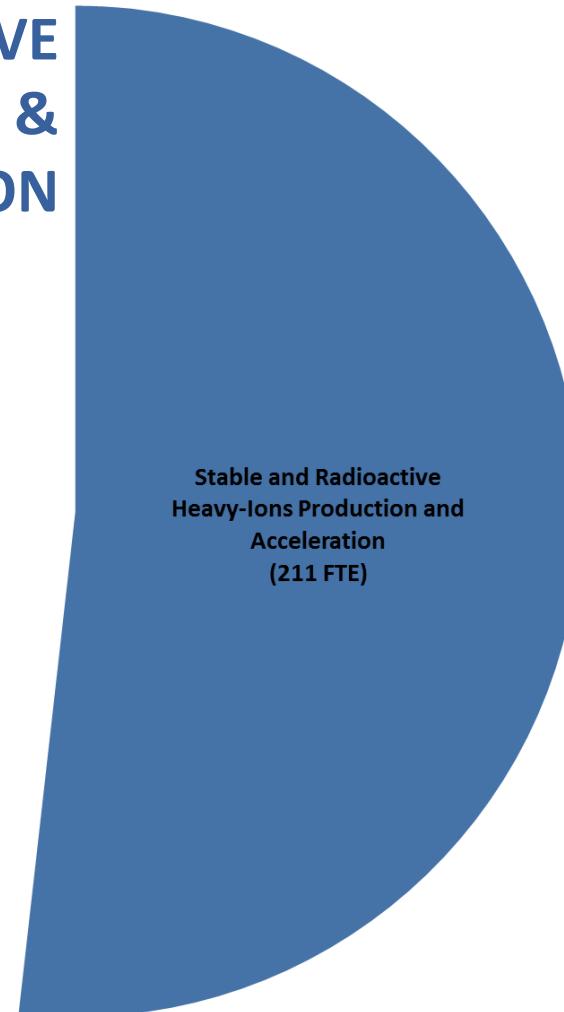

Facility construction

SPIRAL2, S3, DESIR, SPES

Research & Developments

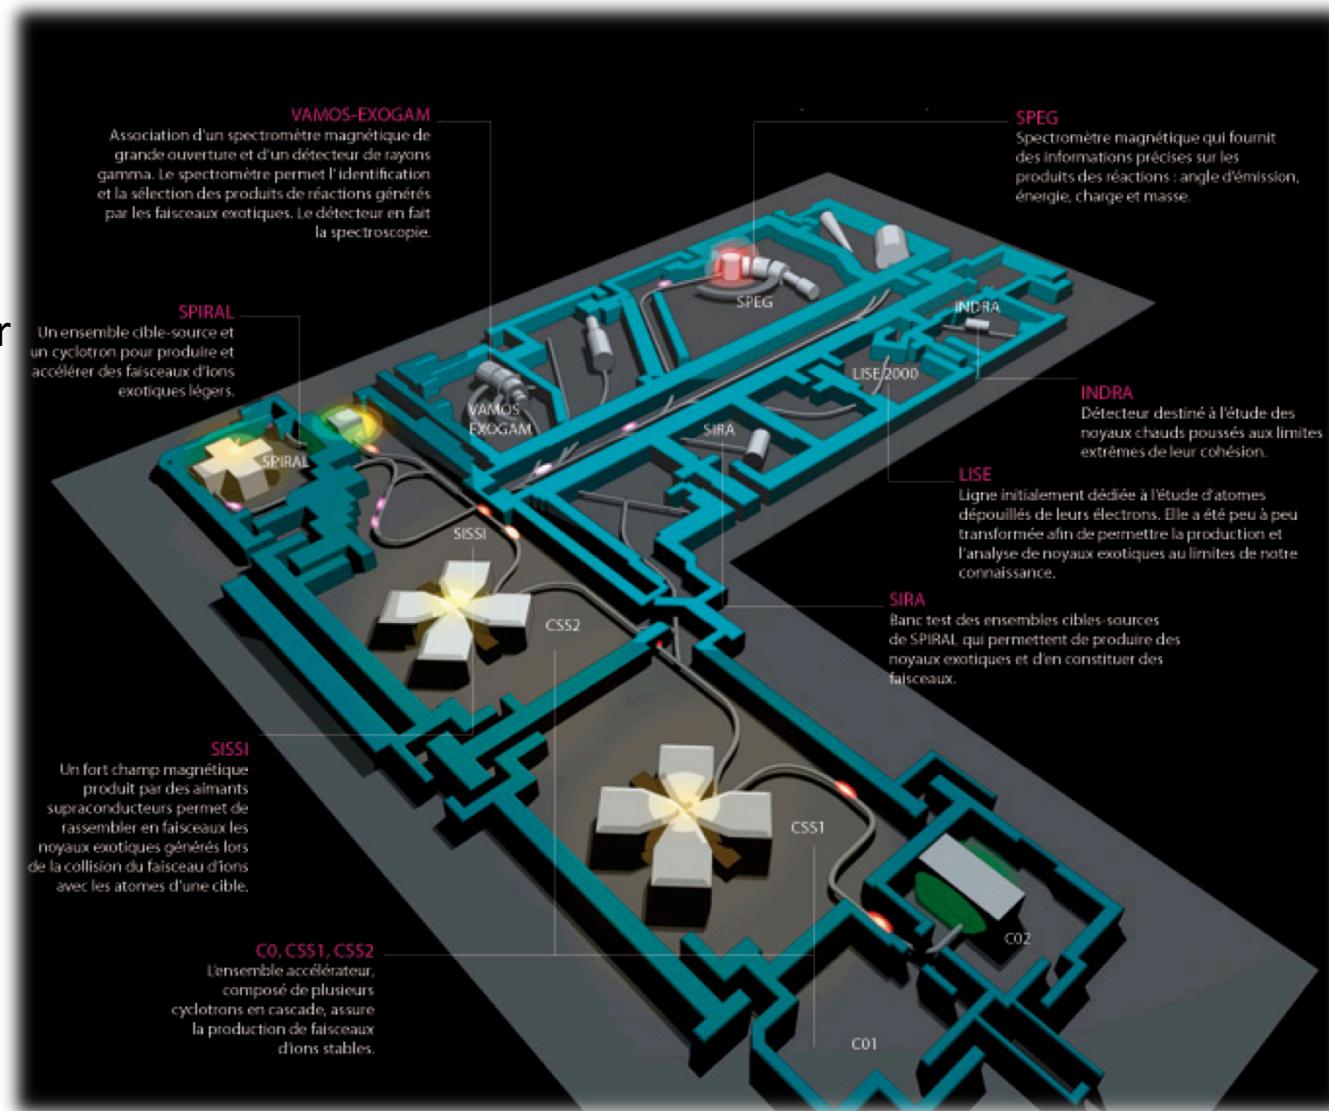

R&D ion sources

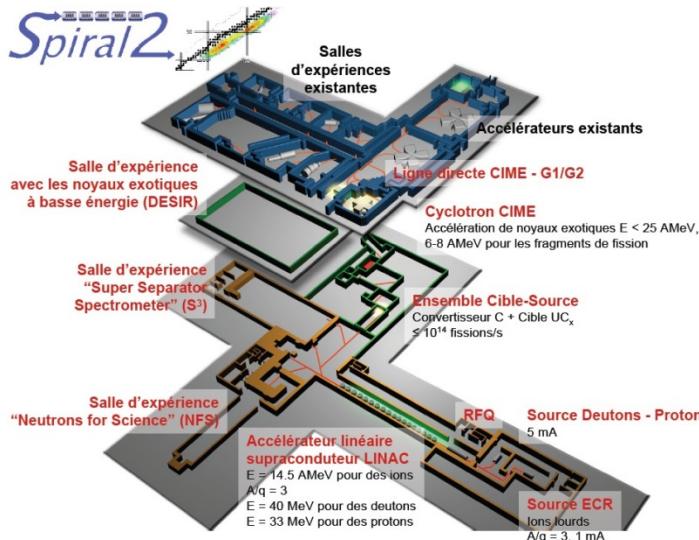

R&D radioactive beams

Grand Accélérateur National d'Ions Lourds (CEA/CNRS)

- Main French accelerator complex for nuclear physics
- Cyclotrons complex (CSS1, CSS2, SPIRAL...)
- Several experimental areas & instruments (VAMOS, LISE...)
- Recent upgrade of SPIRAL1
- Major upgrade SPIRAL2 under construction

Contribution to SPIRAL-2

SPIRAL-2 project

(Système de production d'Ions Radioactifs en Ligne de 2^{ème} génération)

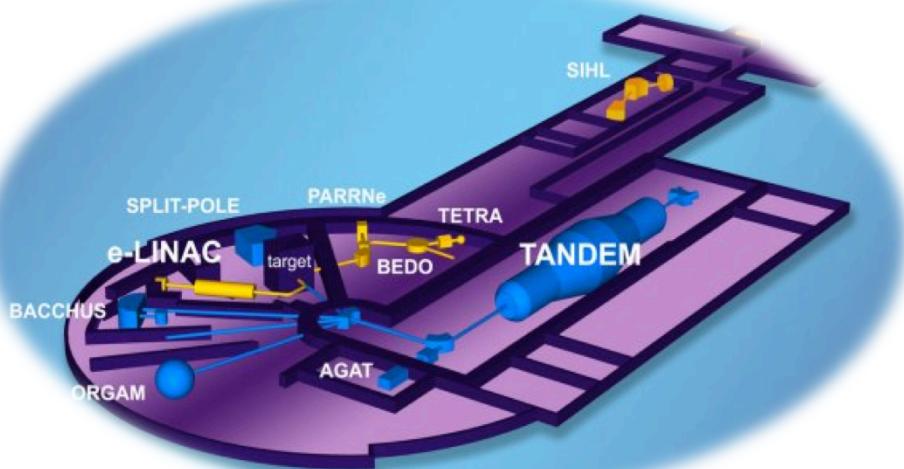

- Phase 1 = 200kW ion SRF linac + 2 experimental halls (NFS, S3)
- Presently in commissioning phase
- Phase 1+ -> DESIR experimental hall
- Phase 2 (on-hold) -> ISOL production building

IN2P3 contribution to SPIRAL-2

- Accelerator design & commissioning (GANIL, IPNO)
- Heavy-ion injector (LPSC, GANIL)
- High-energy SRF cryomodules (IPNO, LPSC, GANIL)
- Cryogenic plant & distribution (IPNO, GANIL)
- Beam instrumentation & dump (IPNO, IPHC, LPSC, IPNL)
- S3 & DESIR (CENBG, CSNSM, IPNO, IPHC, LPC, GANIL)
- R&D for SPIRAL2 phase 2 (IPNO, IPHC, LPSC, LPC, GANIL)

ALTO, heavy-ion R&D

ALTO platform (IPN Orsay)

(Accélérateur Linéaire et Tandem à Orsay)

- 15 MV tandem -> stable beams
- 50 MeV e-linac -> exotic beams (photofission)
- Beam lines & instrumentation
- Carburation lab
-> R&D on Target Ion Sources systems

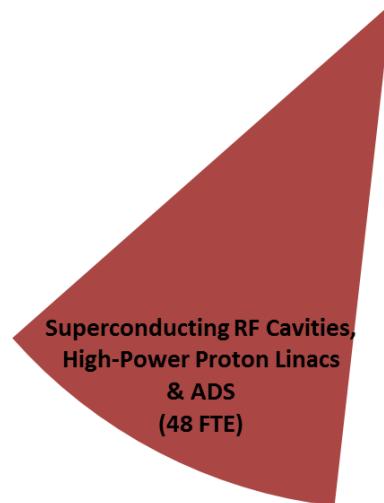

R&D on stable & radioactive ion beams

- R&D on high-frequency high intensity ECR sources:
Phoenix sources, 60GHz prototype... (LPSC, GANIL, IPHC)
- R&D on ISOL Target Ion Sources systems (IPNO, GANIL)
- R&D on charge breeding systems incl. contribution to SPES (LPSC, GANIL, LPC)
- R&D on radioactive beam manipulation (CENBG, CSNSM, GANIL, IPHC, IPNO, LPC)

SUPERCONDUCTING RF CAVITIES, HIGH-POWER PROTON LINACS & ADS

- Leading labs**
IPNO, LPSC
- Other labs:**
LAL, CSNSM, IPHC, GANIL, SUBATECH

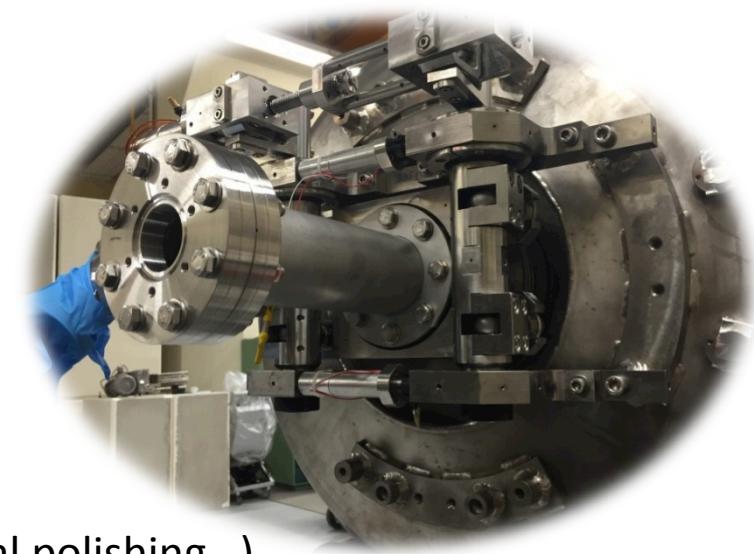

- Accelerator operation & platforms**
SUPRATECH
- Facility construction**
ESS, FAIR, IPHI
- Research & Developments**
R&D SRF reliability
R&D SRF high gradient high Qo
R&D MYRRHA & ADS incl. GENEPPI-3C
R&D HI Diag&Control
R&D CERN-SPL
R&D ESSnuSB

R&D for high-power hadron linacs

R&D on Superconducting RF (IPNO, LAL, LPSC)

- Low-beta cavity design (Spoke, QWR)
- Power couplers design incl. R&D multipacting
- Cryomodule design (e.g. CERN-SPL module)
- R&D on high gradients (SRF multi-layer thin films)
- R&D on Qo improvement (heat treatments, mechanical polishing...)
- R&D on magnetic shielding, Cold Tuning Systems, quench detection...

R&D on high-intensity instrumentation (IPNO, LPSC)

- R&D on beam diagnostics (BPM, WS, 4D emit..)
- R&D on digital LLRF

Platforms for Superconducting RF R&D

SUPRATECH platform (IPN Orsay)

- 85m² ISO4 clean room
- Surface treatment lab
- Helium liquifier (70l/h) & 2K pumping
- Heat treatment station
- Cryogenic test halls & temperature sensor calibration station
- 80kW 700 MHz IOT & 2.8MW 350MHz klystron
- PANAMA platform for material characterization (IPNO, LAL, CSNSM)

SUPRATECH platform (LAL Orsay)

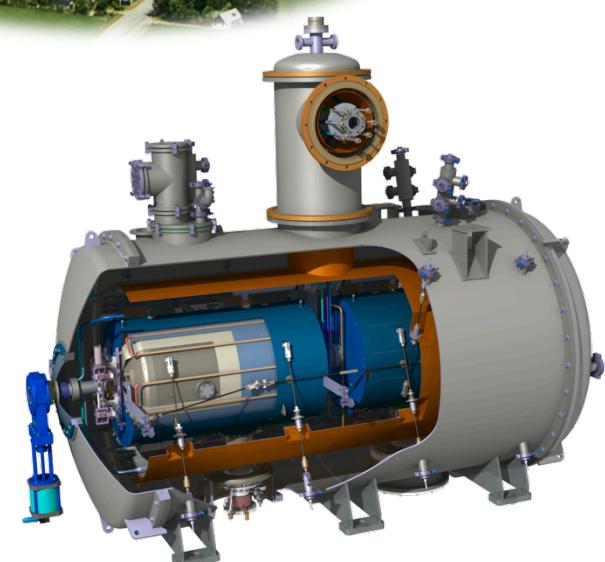

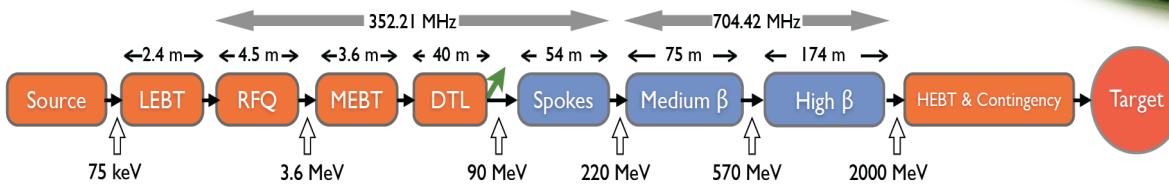

- 70m² ISO5 clean room
- 5MW 1.3 GHz RF station

Contribution to ESS

European Spallation Source (ESS, Lund, Sweden)

- ❑ 5MW high-power proton SRF linac
- ❑ 2 GeV, 62.5mA pulsed @4% dc
- ❑ Construction has started
- ❑ First beam planned in 2019

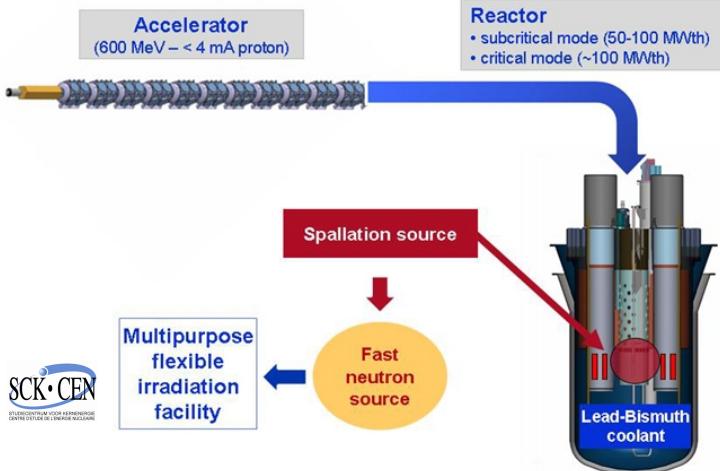

IN2P3 contribution to ESS (IPN Orsay)

- ❑ R&D on spoke and elliptical cryomodules
- ❑ In-kind = Spoke cavities, power couplers & cryomodules
- ❑ + associated cryogenic distribution and C&C

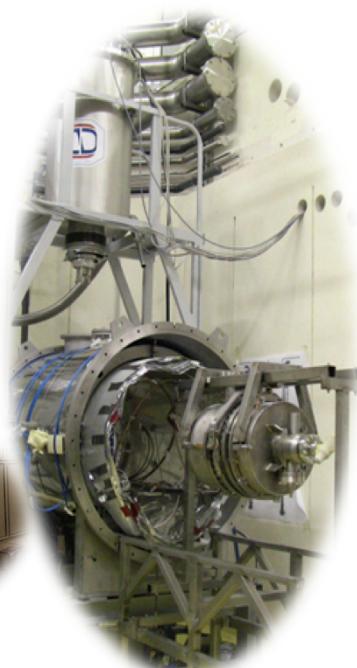

R&D for ADS and MYRRHA

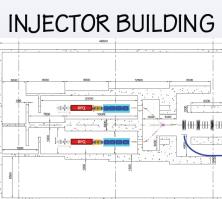

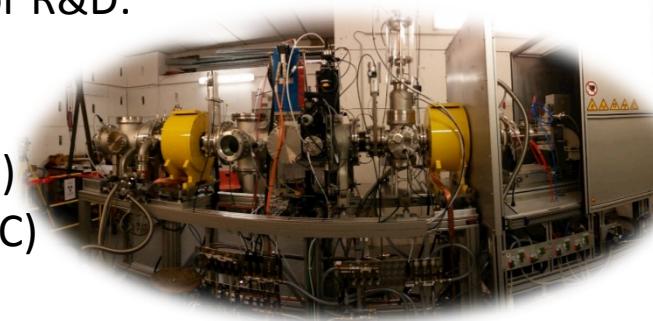

Multipurpose hYbrid Research Reactor for High-tech Applications (SCK*CEN, Mol, Belgium)

- Demonstration of the ADS concept at high power
-> transmutation of nuclear wastes
- 2.4MW, 600MeV SRF CW linac
- Main issue = reliability

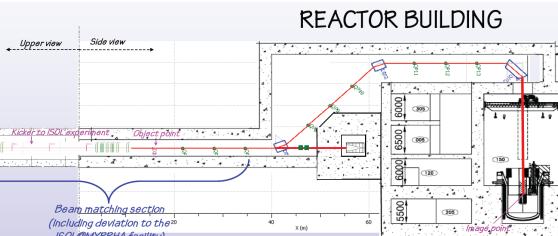

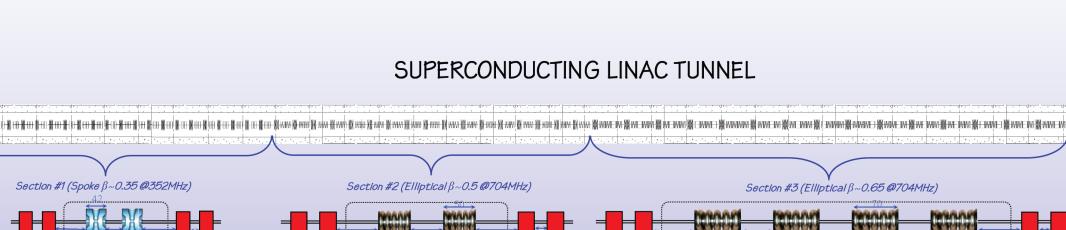

IN2P3 contribution to MYRRHA

- European coordination of ADS accelerator R&D:
EUROTRANS, MAX, MYRTE... (IPNO)
- Accelerator design (IPNO)
- Construction of MYRRHA front-end (LPSC)
- R&D on space-charge compensation (LPSC)
- R&D on spoke cryomodule (IPNO)
- R&D on innovative fault-tolerant systems incl. LLRF (IPNO, LPSC)

SUPERCONDUCTING LINAC TUNNEL

Contributions to GUINEVERE, IPHI & FAIR

GUINEVERE experiment (SCK*CEN, Mol, Belgium)

(Generator of Uninterrupted Intense Neutrons at the lead Venus REactor)

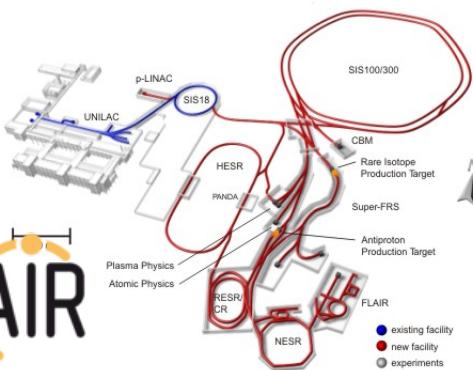

- Low-power ADS mock-up for sub-critical reactor studies
- GENEPI-3C 200keV deuteron accelerator designed & constructed by LPSC (+ IPNO, IPHC, LPC Caen), coupled to reactor since 2011

IPHI (CEA Saclay)

(Injecteur de Protons de Haute Intensité)

- 100mA 3MeV proton injector demonstrator
- IN2P3 contribution on: LLRF systems, beam transport and beam instrumentation (IPNO), beam dump (LPSC)

FAIR (GSI, Darmstadt, Germany)

(Facility for Antiproton and Ion Research in Europe)

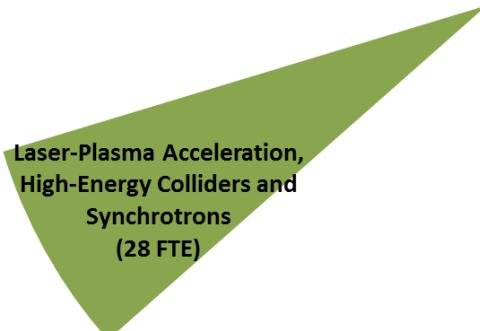

- Major upgrade of the GSI facility
- IN2P3 contribution: RF power chain for the p linac (IPNO)

Accelerator & Technology R&D programs

LASER-PLASMA ACCELERATION, HIGH-ENERGY COLLIDERS, SYNCHROTRONS

- Leading labs**
LAL
- Other labs:**
IPHC, LAPP, LLR, LPSC, IPNO, IPNL

Laser-Plasma Acceleration,
High-Energy Colliders and
Synchrotrons
(28 FTE)

- Accelerator operation & platforms**
N/A
- Facility construction**
N/A
- Research & Developments**
R&D LPA electrons
R&D LPA ions
R&D Future Linear Colliders
R&D SuperKEKB - BEAST
R&D LHC upgrade (UA9)
R&D FCC
R&D JEDI

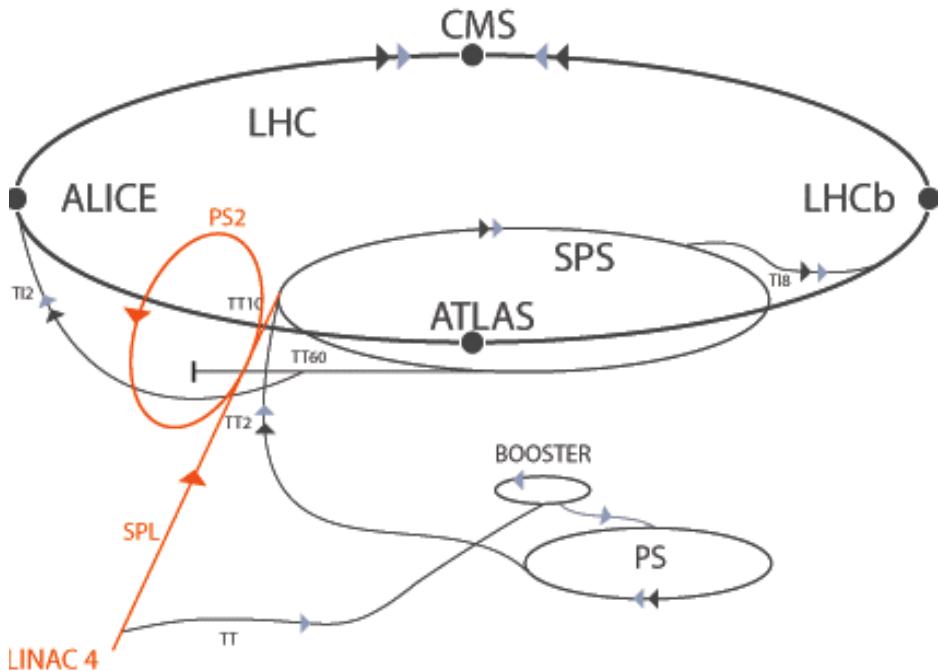

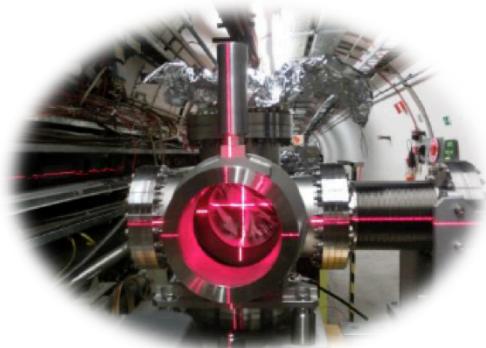

Contribution to CERN

The LHC complex

(Large Hadron Collider)

- World-leading facility for particle physics
- Linac2 + Booster + PS + SPS + LHC
- LHC complex upgrade on-going for luminosity increase: High Luminosity LHC

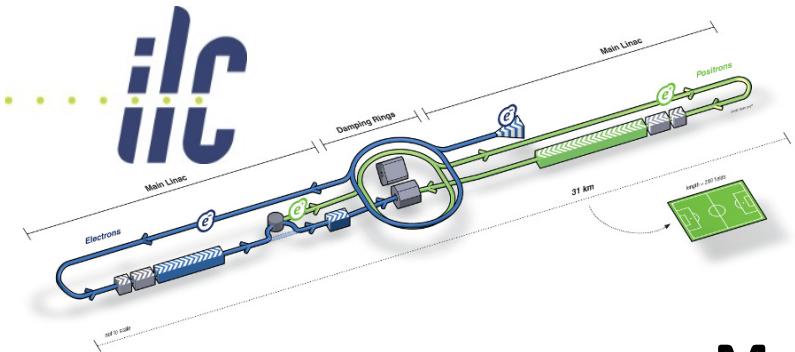

IN2P3 contribution to LHC upgrade

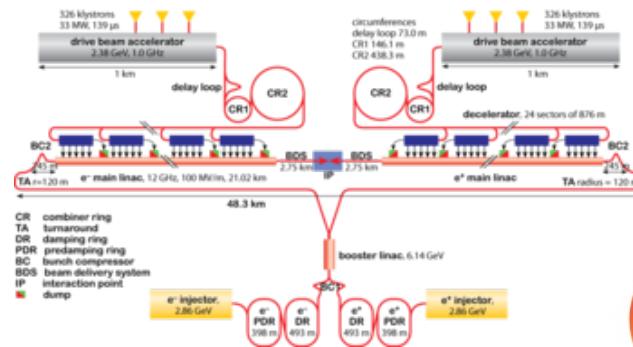

- Participation to LINAC4 construction (LAL, LPSC)
- PS magnets windings (LPSC)
- R&D on SC cryomodules for SPL (IPNO)
- R&D on cristal collimation - UA9 experiment (LAL)
- HL-LHC contributions under discussion

R&D for next generation colliders

ILC (International Linear Collider)

CLIC (Compact Linear Collider)

Main IN2P3 contributions

- R&D on intense positron sources for ILC and CLIC: Compton-based, hybrid scheme (LAL, IPNL)
- R&D on beam active stabilisation @ATF2 & CTF3 (LAPP)
- R&D on nano-beam control & diagnostics at the IP for ILC and CLIC @ ATF2 (LAL)
- Participation to SuperKEKB & Belle-II commissioning: luminosity & background monitoring at IP (LAL, IPHC)
- Optical design of the collimation insertion for FCC h-h: participation to the EuroCirCol DS (LAL, IPNO)

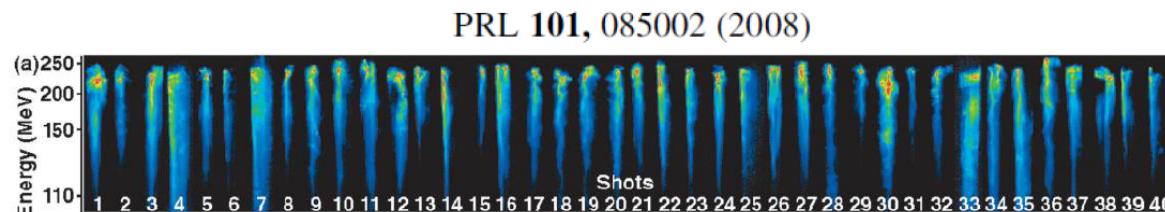

FCC (Future Circular Collider)

R&D on laser-plasma acceleration

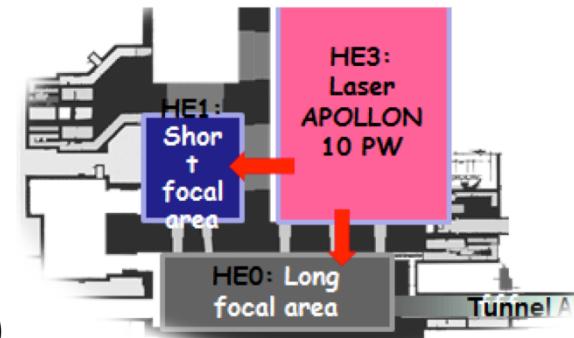

Laser Plasma acceleration

- Acceleration by high-gradient laser wakefield
- Potential for dramatic decrease of accelerator dimensions
- State-of-the-art with Ti-Saph laser (100TW, 30fs): electron acceleration up to ~1 GeV

R&D on LP acceleration (LLR, LAL, CENBG)

- R&D ion acceleration at high repetition rate (CENBG)
- R&D electron acceleration & beam characterisation (LLR, LAL)
- Contribution to EuPRAXIA European design study (LLR)
- Contribution to the construction of the CILEX platform (LLR, LAL)
(Centre Interdisciplinaire Lumière Extrême, CNRS/CEA/Soleil/UPS)
- R&D on external injection around LASERIX & PHIL (LAL)

Cilex

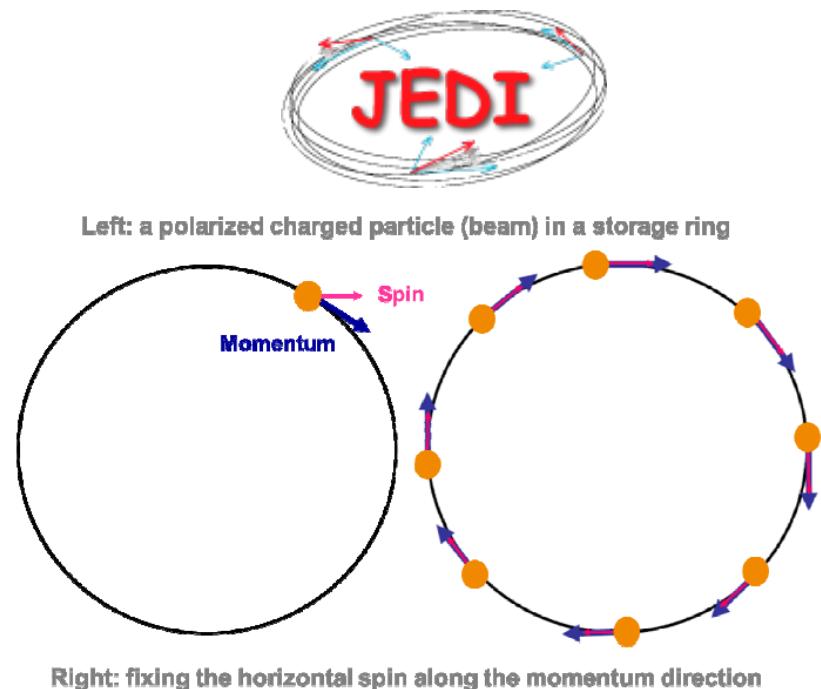

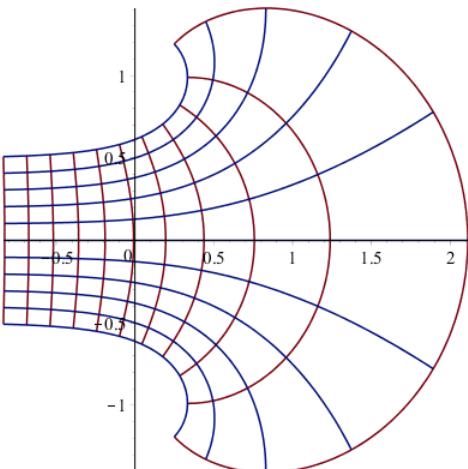

Participation to the JEDI collaboration

JEDI (FZ Juelich)

(Jülich Electric Dipole moment Investigation)

- Measurement of the permanent Electric Dipole Moments of charged particles (e.g. protons, deuterons, helium)
- Stored in an electrostatic storage ring

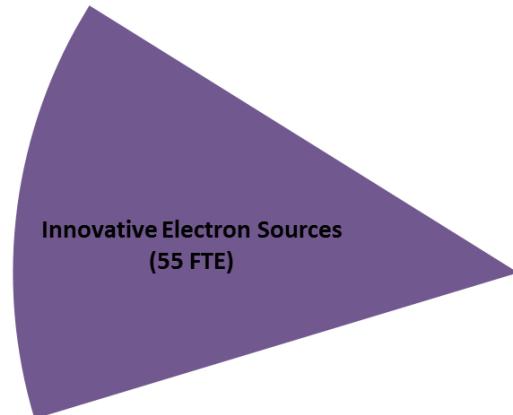

IN2P3 contribution (LPSC)

- Participation to the design of the storage ring
- Detailed design of electrostatic deflectors

Accelerator & Technology R&D programs

INNOVATIVE ELECTRON SOURCES

- Leading labs**
LAL
- Other labs:**
CENBG
- Accelerator operation & platforms**
PHIL
- Facility construction**
X-FEL, THOM-X, LCLS2
- Research & Developments**
R&D short bunches
R&D LUNEX5
R&D SPEEP

Platforms for accelerators R&D

PHIL (LAL Orsay)

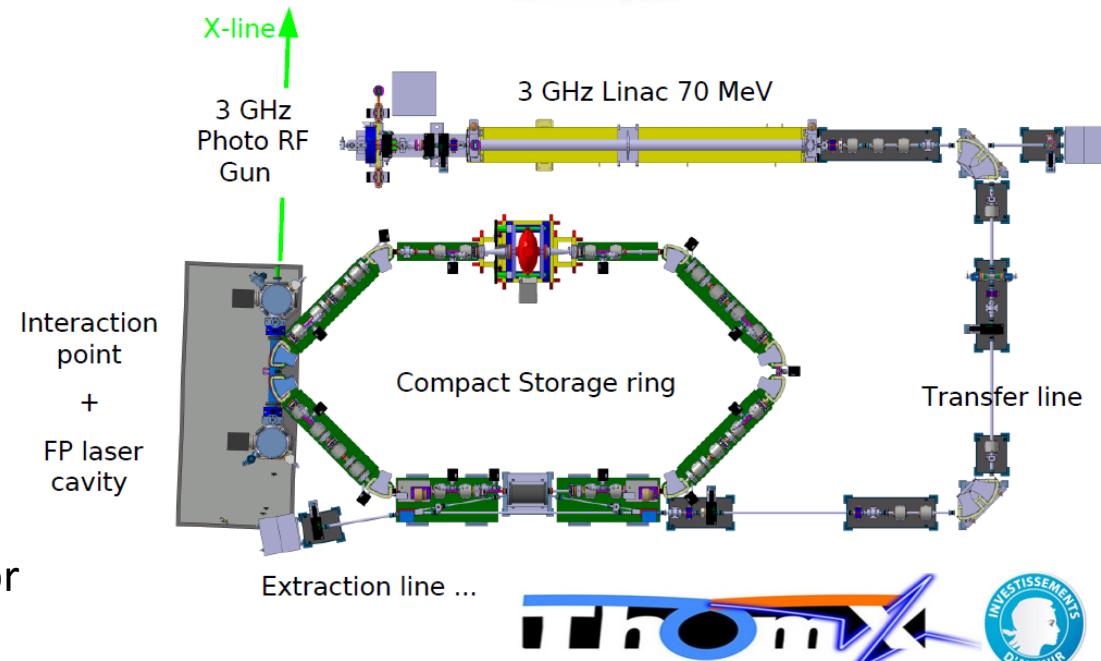

(Photo-Injector au Lal)

- Test bench for high brilliance photo-guns
- 3GHz klystron
- Picosecond UV laser Nd:YLF
- Beam lines & instrumentation

ThomX project (LAL Orsay)

- Compact & intense X-ray source based on Compton backscattering (small enough to be installed in an hospital or museum)
- 3Ghz photo-gun + linac + compact electron storage ring
- Laser + Fabry-Perot optical resonator
- Under construction

Contributions to XFEL, other R&D

European XFEL (DESY, Hamburg, Germany)

(X-ray Free Electron Laser)

- New generation light source w/ extremely intense Xray production
- 20 GeV electron 1.3GHz SRF linac (100 12m long modules)
- IN2P3 contribution: conditionning & delivery of 800 RF couplers (LAL)

Related activities on couplers (LAL)

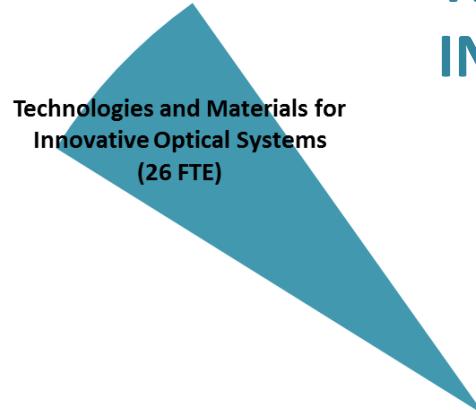

- Contribution to LCLS2 couplers production with SLAC
- R&D for the LUNEX5 project (5th generation FEL) with SOLEIL

Other R&D activities

- R&D ETALON / DRUM – short bunch (sub-ps) production (using Laserix) & longitudinal profil measurement by Smith-Purcell coherent radiation (LAL)
- R&D SPEEP – laser-excited pulsed plasma electron source (CENBG)

Accelerator & Technology R&D programs

Technologies and Materials for
Innovative Optical Systems
(26 FTE)

TECHNOLOGIES & MATERIALS FOR INNOVATIVE OPTICAL SYSTEMS

- Leading labs**
LMA, LAL
- Other labs:**
N/A
- Accelerator operation & platforms**
LMA platform
- Facility construction**
ELI-NP, THOM-X
LIGO, VIRGO, LSST, DKIST, KAGRA
- Research & Developments**
R&D Mighty Laser
R&D optical thin films

R&D on innovative optical systems

R&D on thin optical films (LMA)

- R&D on low loss coatings
- R&D on metrology
- R&D on materials
- Large platform

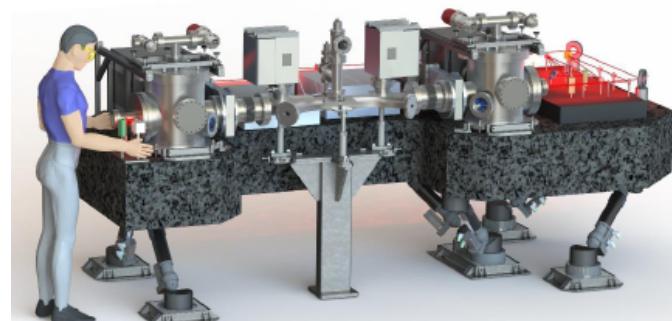

Contribution to interferometers & telescopes projects (LMA)

- Interferometers: VIRGO, LIGO...
- Telescopes: LSST, DKIST...

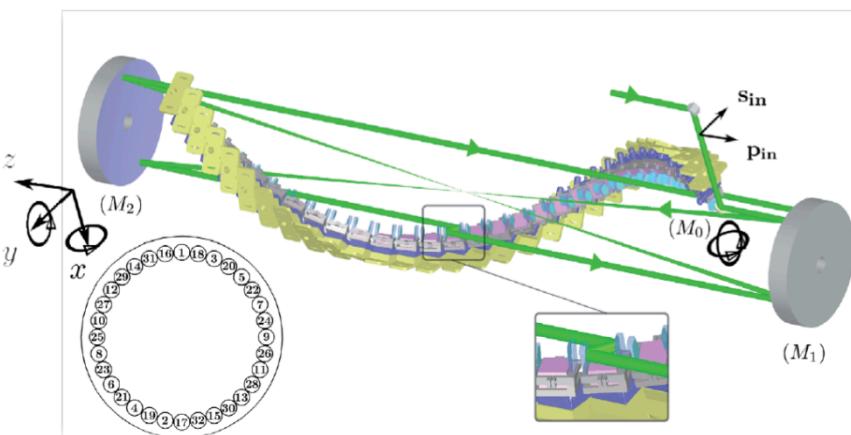

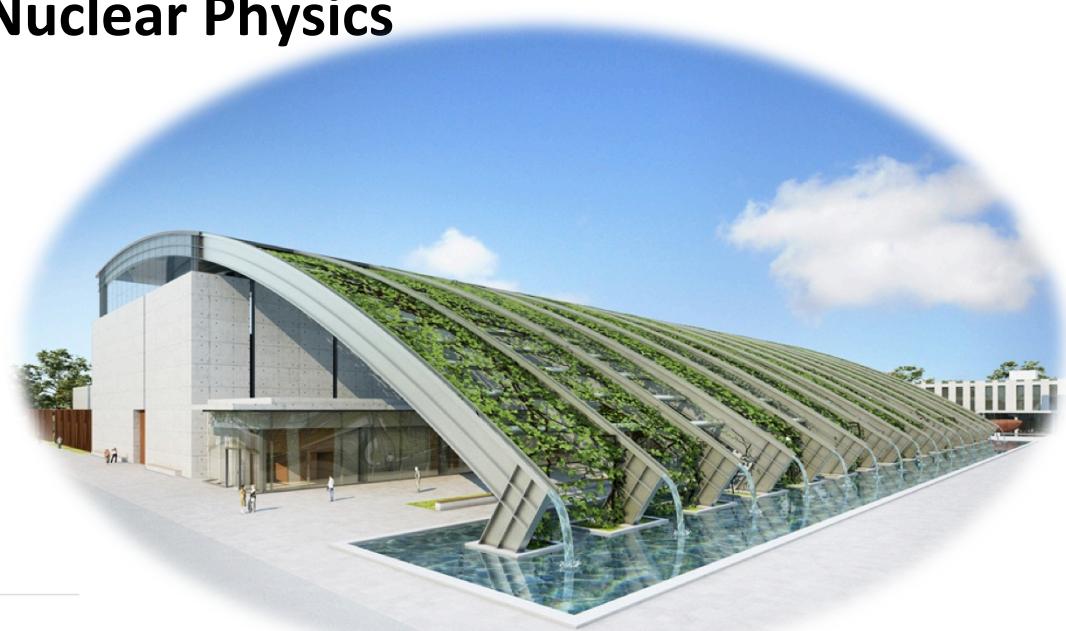

R&D on laser optical systems (LAL)

- R&D MightyLaser on High Q Fabry-Perrot cavities
- ThomX interaction cavity & associated X-ray line (LAL)

Extreme Light Infrastructure – Nuclear Physics (Bucharest, Romania)

- Very intense Compton γ -ray source ($E_\gamma > 19$ MeV)
- 700 MeV warm electron linac
- Two 10 PW lasers
- Under construction

IN2P3 contribution to ELI-NP (LAL Orsay)

- Beam/laser interaction point
- Design, alignment, synchronisation & commissioning of the optical setup

Accelerator & Technology R&D programs

PLATFORMS FOR MULTI-DISCIPLINARY RESEARCH

- Leading labs**
N/A
- Other labs:**
CENBG, CSNSM, IPHC, IPNL, IPNO,
LAL, LPSC, SUBATECH + ARRONAX

- Accelerator operation & platforms**
AIFIRA, ANAFIRE, ARRONAX, CYRCE,
GENEPI2, SCALP
- Facility construction**
ANDROMEDE, PRAE

Platforms for interdisciplinary research

Materials, Radiobiology, Environment

AIFIRA platform (CENBG Bordeaux)

(Applications Interdisciplinaires des Faisceaux d'Ions en Région Aquitaine)

- 3.5MV electrostatic accelerator
- High spatial resolution beam lines

ANAFIRE platform (IPN Lyon)

(ANAlysis and Ion beams for Radiobiology and the Environment)

- 4MV Van de Graaf
- 400kV ion implanter

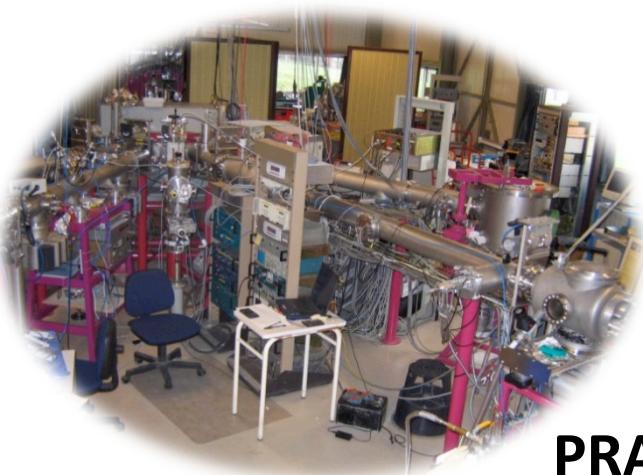

Platforms for interdisciplinary research

Materials, Radiobiology & therapy, Nuclear physics

SCALP platform (CSNSM Orsay)

- ARAMIS 2MV tandem accelerator
- IRMA 190kV ion implanter
- 200 kV Transmission Electron Microscope
- SIDONIE 50kV isotope separator

ANDROMEDE

ANDROMEDE project (IPN Orsay)

(New instrument for mass spectrometry analysis of nano-particles)

- 4MV Van de Graaf
- Under construction

PRAE project (LAL, IPNO)

(Platform for Research and Applications with Electrons)

- 70 MeV electron beam – design phase
- Application: nuclear physics, radiotherapy...

Platforms for interdisciplinary research

Nuclear medicine, Nuclear energy, Radiochemistry

ARRONAX (Nantes)

(Accélérateur pour la Recherche en
Radiochimie en Oncologie à Nantes AtlantiX)

- 70 MeV cyclotron
- Radio-isotope production

CYRCé platform (IPHC Strasbourg)

(Cyclotron pour la Recherche et l'Enseignement)

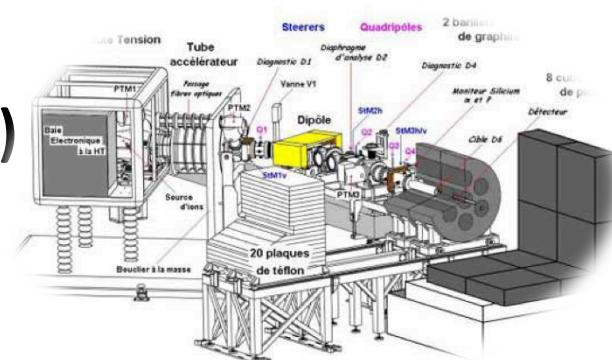

- 24 MeV cyclotron
- Radio-isotope production
- Imaging platform

PEREN-n platform (LPSC Genoble)

(Plate-forme d'Etude et de Recherche sur
l'Energie Nucléaire - neutronique)

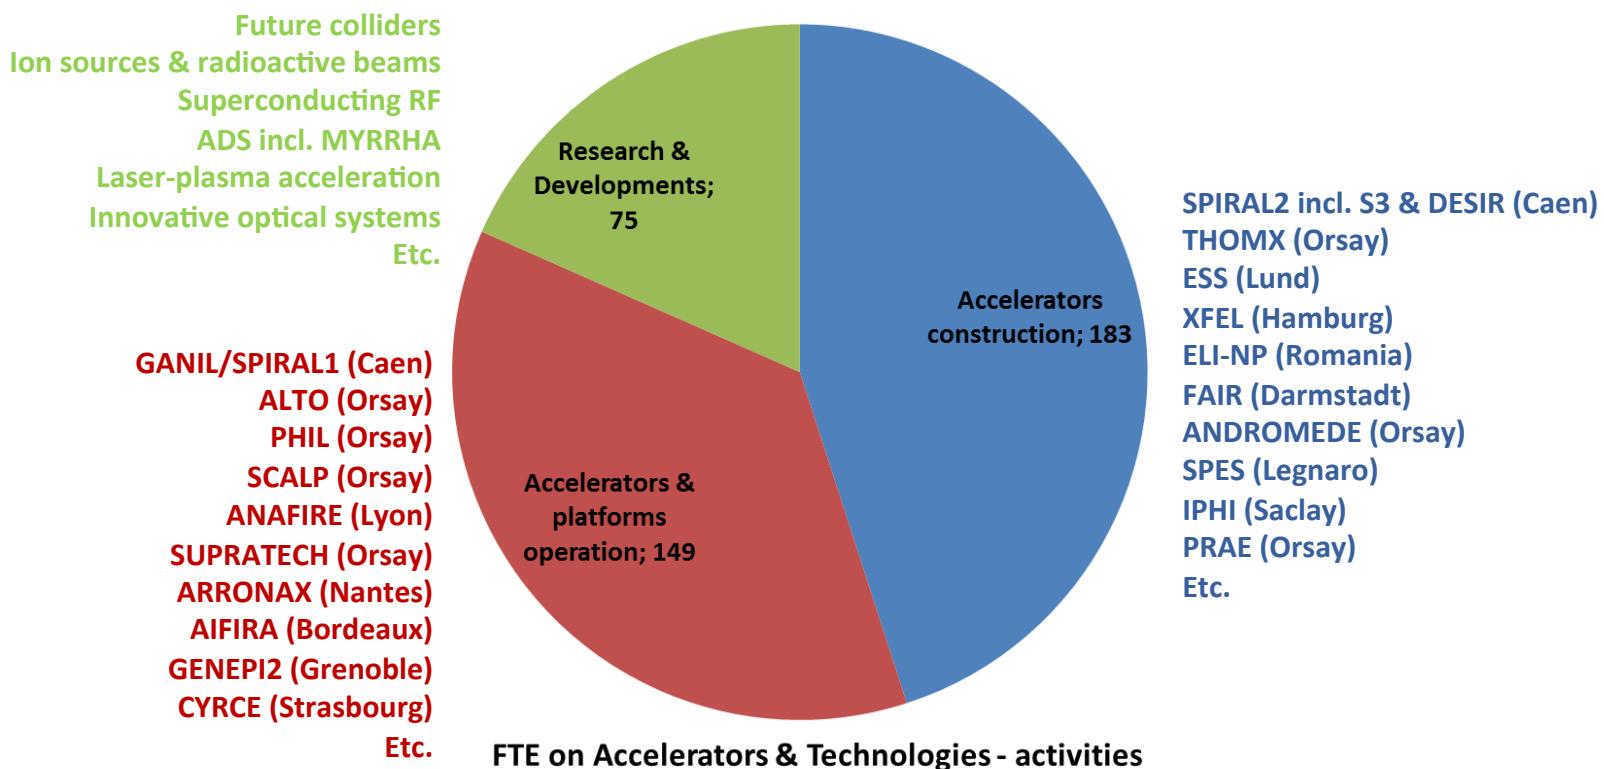

- 250 kV GENEPI-2 deuteron beam
- Fast neutron source

Conclusions and roadmap

Conclusions

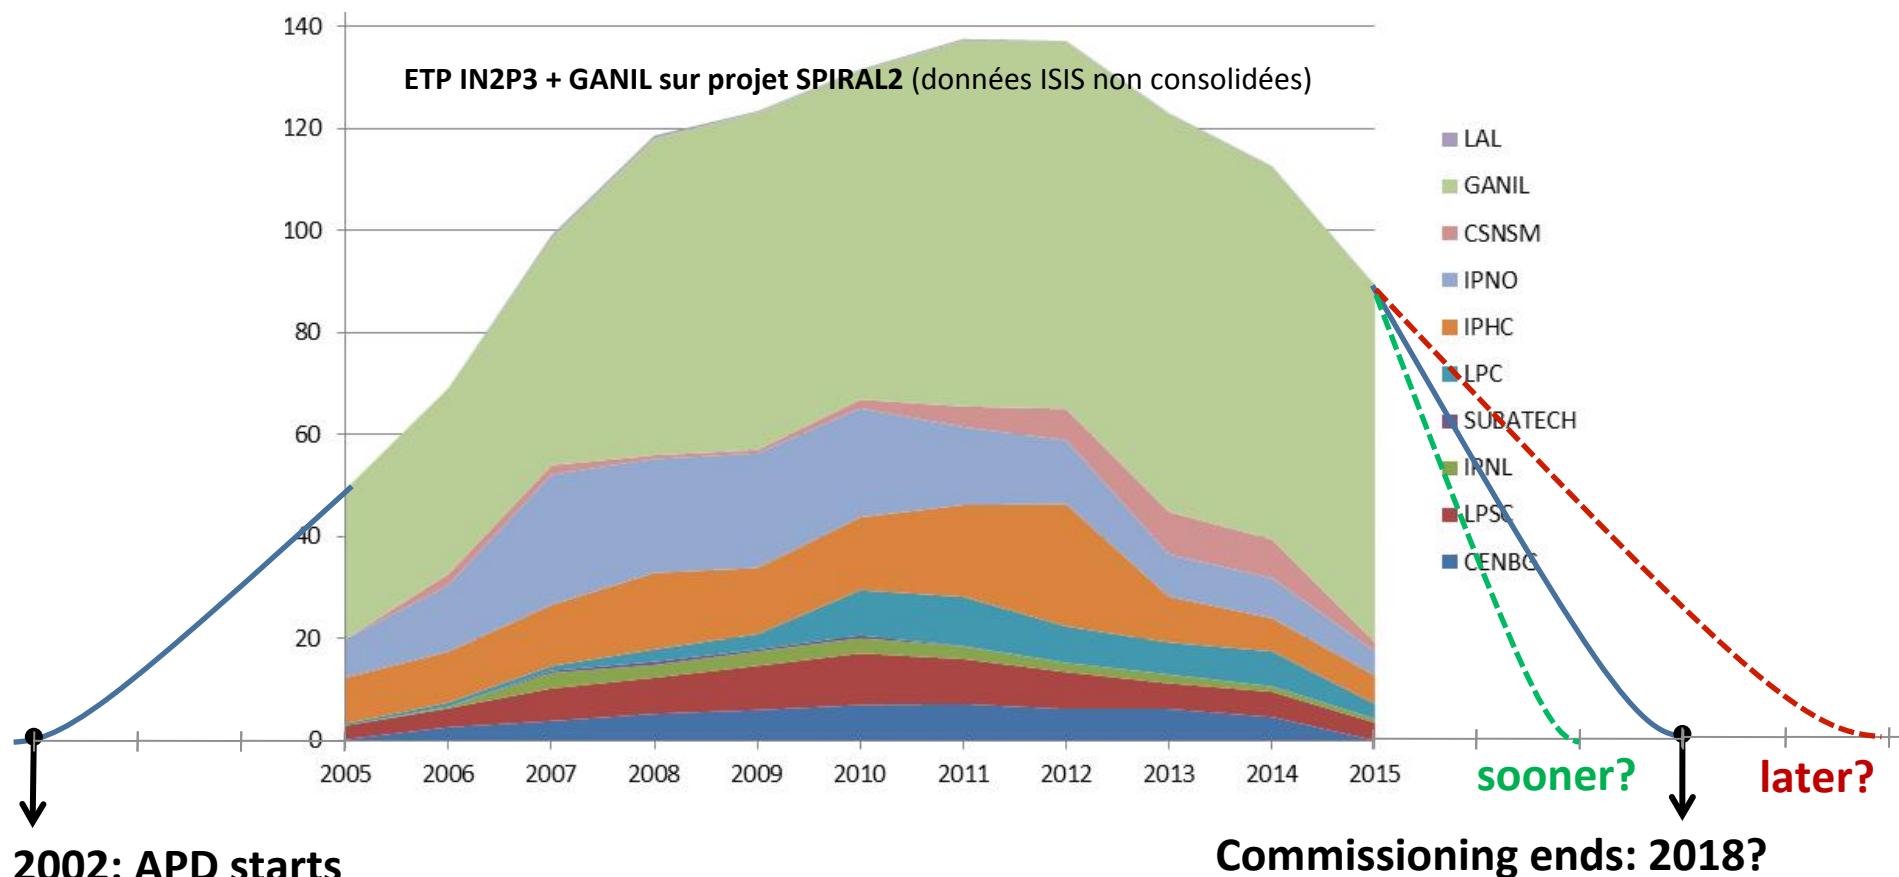

- Accelerator physics and R&D = **healthy disciplin**
- IN2P3 accelerator teams are involved in **almost all major accelerator projects**
- Not easy to keep a **good balance between operation, project construction & R&D**

Conclusions and roadmap

Roadmap priorities

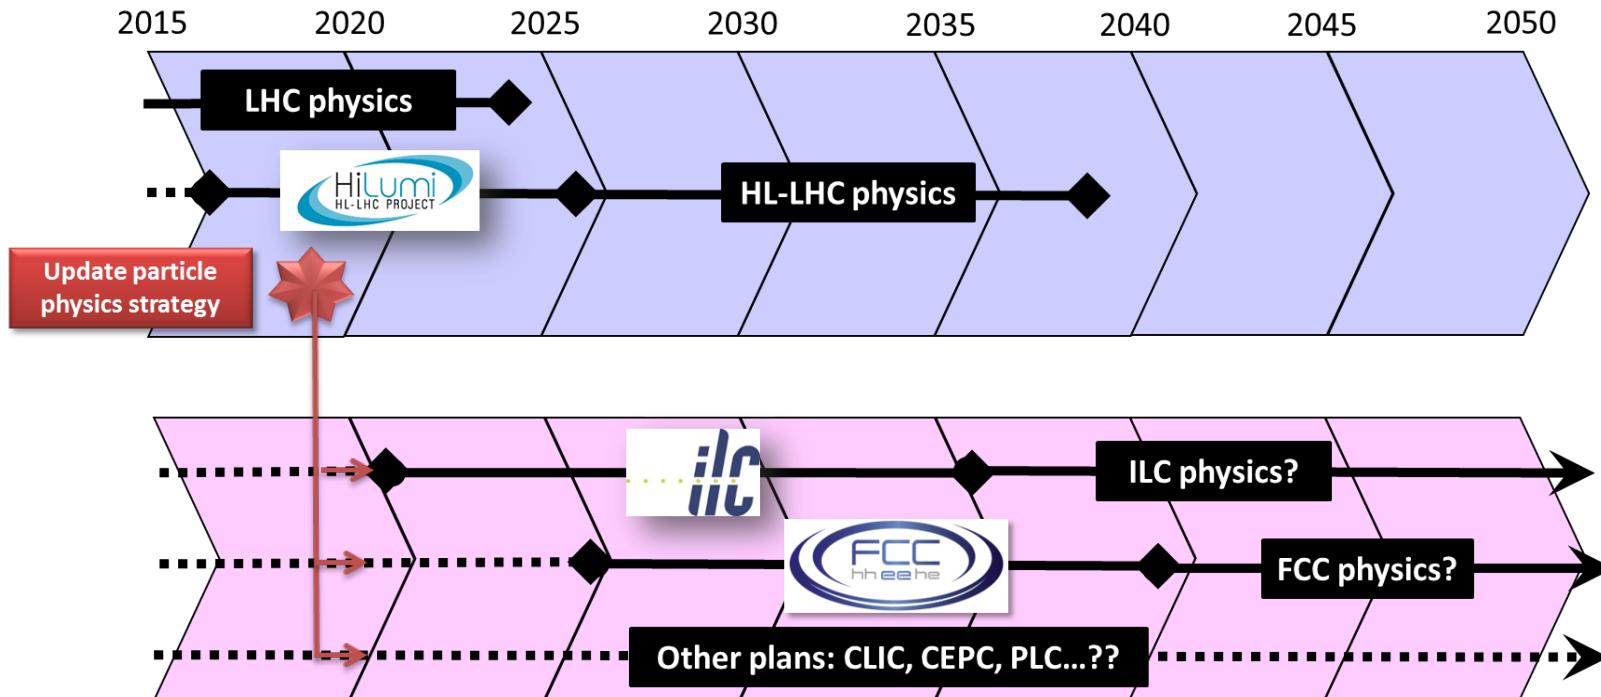

- Achieve SPIRAL-2 and support GANIL to prepare SPIRAL2 upgrades (1+, 1++, 2?)

Conclusions and roadmap

Roadmap priorities

- Achieve SPIRAL-2 and support GANIL to prepare SPIRAL2 upgrades (1+, 1++, 2?)
- Support CERN and contribute to next-generation collider projects

Conclusions and roadmap

Roadmap priorities

- Achieve SPIRAL-2 and support GANIL to prepare SPIRAL2 upgrades (1+, 1++, 2?)
- Support CERN and contribute to next-generation collider projects
- Pursue & achieve contributions to **X-FEL, FAIR and ESS**
- Contribute to **MYRRHA** and ADS systems
- Support emergence of **innovative small/medium scale machines** for multi-disciplinary applications & societal needs (Compton sources e.g. ThomX, medical accelerators, irradiation stations...)
- Push R&D effort on **IN2P3 specific expertises**:
Ion sources, Superconducting RF, High-power proton linacs, innovative electron sources, Laser/beam interaction & associated optical systems
- Explore further new R&D areas for **next-generation accelerators** (plasma acceleration, ERL?) in close partnership with CEA

Merci pour votre attention!
