Introduction	GPDs

Conclusion

Numerical Inversion

• Quark GPD: $H(x,\xi) = 0$ for $-1 < x < -|\xi| \Longrightarrow f(\beta,\alpha) = 0$ for $\beta < 0$.

э

Introduction	GPDs

Conclusion

Numerical Inversion

Quark GPD: H (x, ξ) = 0 for −1 < x < − |ξ| ⇒ f (β, α) = 0 for β < 0.

Introduction	GPDs

Conclusion

Numerical Inversion

Quark GPD: H(x, ξ) = 0 for −1 < x < − |ξ| ⇒ f (β, α) = 0 for β < 0.

• Domains $\beta < 0$ and $\beta > 0$ are uncorrelated in the DGLAP region.

Introduction	GPDs

Conclusion

Numerical Inversion

- Quark GPD: $H(x,\xi) = 0$ for $-1 < x < -|\xi| \Longrightarrow f(\beta,\alpha) = 0$ for $\beta < 0$.
- Domains $\beta < 0$ and $\beta > 0$ are uncorrelated in the DGLAP region.
- Divide and conquer:
 - Better numerical stability.
 - Lesser complexity: $O(N^p + N^p) \ll O((N + N)^p)$.

Introduction	GPDs

Conclusion

Numerical Inversion

- Quark GPD: H(x, ξ) = 0 for −1 < x < − |ξ| ⇒ f (β, α) = 0 for β < 0.
- Domains $\beta < 0$ and $\beta > 0$ are uncorrelated in the DGLAP region.
- Divide and conquer:
 - Better numerical stability.
 - Lesser complexity: $O(N^p + N^p) \ll O((N + N)^p)$.
- α -parity of the DD: $f(\beta, -\alpha) = f(\beta, \alpha)$.

Introduction to GPDs	Modeling GPDs	Conclusion
	0000000	

• The inversion of a Fredholm equation of the first kind

$$\int K(x,y) f(y) \, \mathrm{d}y = g(x) \tag{15}$$

is an ill-posed problem.

э

Introductio	troduction to GPDs		Modeling GPDs ○○○○●○○	Conclusion 000	

The inversion of a Fredholm equation of the first kind ۰

$$\int K(x,y) f(y) \, \mathrm{d}y = g(x) \tag{15}$$

- is an ill-posed problem.
 - The inverse is not continuous: an arbitrarily small variation Δg of the rhs can lead to an arbitrarily large variation Δf of the solution.

э
