

Education and Outreach activities on Astroparticle Physics in Romania

mardi 15 octobre 2019 19:30 (5 minutes)

In 2014, Romania became full member of the Pierre Auger Collaboration, represented by four national institutions in Bucharest. Since then at the ISS we have in addition joined the task force of Auger in spreading physics studied at the Pierre Auger Observatory through education and outreach activities. In this poster, I'll present such activities we've contributed with in the field of Astroparticle Physics in Romania, in various scenarios, such as: student's practical work, week of different school, workshops with physics teachers and pupils, public talks or expositions given at national science festivals, European Researchers Nights, European Space Expo, and last but not least communicating science through art (audio-visual) and multimedia. Through the various experiences we've gathered so far, we acknowledged the need of communicating science for continuous education at any age, any level of knowledge, and in synergy with other fields.
